Illuminating the Future: Sustainability and Lighting Design

- What role does lighting play in making a project more sustainable?
- How do you select lighting products that help achieve the goals of sustainable design?
- Do Light Emitting Diodes (LEDs) and advanced daylighting controls make a project sustainable?
- What factors beyond energy efficiency need to be considered?

This lecture will present steps that the IES Sustainable Lighting Committee is taking to determine the course of lighting for sustainable building. Lighting within the USGBC's LEED products will be briefly discussed, as well as a discussion of the importance of cradle-to-cradle type product development and analysis in the development of new light sources.

Co-Sponsored by the Green Building Council of Ventura County
